

## CHILDREN'S CLIMATE PRIZE

Recognizing young people who take  
action for the climate and environment

---

THE AWARD IS PROUDLY PRESENTED TO

# SPARSH

THE THERMAL FLOATER  
NOVEMBER 24, 2022 – SWEDEN

---

### The jury's motivation

The ongoing discussions on renewable energy sources, soaring energy prices and growing electricity demand makes Sparsh's innovation much needed. With the Thermal Floater, Sparsh has an impressive way to mitigate climate change by using thermal energy. Also, the whole idea of a floating device is great and innovative, making use of water surfaces, such as dam reservoirs, wastewater treatment ponds or drinking water reservoirs and thus reducing pressure on land resources. This solution is easy to implement and very accessible, thus it creates a huge potential globally for both households and to countries where land resources are scarce.
